	Гол. щет. Cephalic setae.	Кон. гол. капсу. End of cephal. capsule.	Глаза. Eyes.	Нервн. кол. Nerve-ring.	Кон. пище- в. г. п. End of oeso- phagus.
Длина (Length)...	19	42	190	980	2920
Шир. (Breadth)...	62	76	110	200	275

Very narrow at the anterior extremity, but the tail is thick and short. Cuticle 10  $\mu$ , setae numerous. Cephalic setae 7  $\mu$ . The slits in the grooves of the head-capsule are not closely fitted [contrary to that in *D. antarcticum* (Linst.)]. Strands pass from it into the interior for the support of the oesophagus. A small dorsal tooth is present. Eyes at  $4\frac{1}{2}$  of the length of the capsule from its edge. Spicula 215  $\mu$  with double head; the first two thirds straight, the third—curved. Gubernaculum 120  $\mu$  with upper outgrowth and lateral plates on the sides of the anus. Accessory setae beginning from behind<sup>18</sup>) 1) 4 on the sides of porus caudalis, 2) a pair in the middle of the tail, 3) several postanal papillae, 4) 11—12 real setae, the posterior (4a) brought closely together, 5) 6 pairs of small setae on large swellings.

Murman-Coast.

4 a. *Deontostoma arcticum* (SAVELJEV 1912). Anterior extremity of male. Obj. 1<sup>10</sup>, oc. 1. a.—dorsal part of head-capsule; b.—secondary capsule.

4 b. Idem. Posterior extremity of male. Obj. 3, oc. 3. 1, 2, 3, 4a, 4b, 5—different categories of setae (see text); org. acc.—accessory organ (the punctation ends higher, than it).

4 c. Idem. Spicular apparatus. Obj. 7, oc. 1. Letters indicate different parts of gubernaculum: a.—upper outgrowth; b.—anterior end of embracing part; c.—fillet and thorn on embracing part; d.—terminal lamella.

4 d. Idem. Two setae of the 4 a category (comp. fig. 4b). Obj. 7, oc. 3.

4. *Deontostoma arcticum* (Saveljew).
