

*S. pellucidus* ALLGEN 1932b

Doubtful species! CHITWOOD (1936a) referred this species to his *Araeolaimus* s. str., i.e. to *Southerniella* according to my new interpretation (see p. 9). And, indeed, it is very difficult to decide to which genus (and to which family) *S. pellucidus* belongs since the author's description and figures are too poor.
